Celonis Home

1. The global home screen of SAP Process Mining by Celonis 4 is structured in Projects. Within the projects the Celonis Analyses can be further structured in folders and subfolders.
2. New elements (projects, analyses, folders and data models) can be created with the main action button at the top right
3. Details on selected elements are shown in the right panel. User and group permissions can be accessed here.
4. The dropdown with your username allows access to all settings and administrative options.
5. The tree structure at the left lists all projects and its subfolders in the Celonis installation.
6. At the bottom left, license information, the About page and the Update Checker can be found.
