

# Analysis components

Components in Celonis Analyses allow you to visualize your process data or build up your analysis.

Celonis has five different categories of components, as described below.

- Process Analysis Components: visualize your activities and the way the processes flow through them
- Charts and Tables: plot your data or group, segment and arrange them in tables
- Single KPI Components: track your data according to a single KPI
- Selection Components: helps the user create selections
- Design Components: create design elements for your analysis
