

Mail

The Mail screen is used to provide information on your SMTP server. This is required to distribute [Stories](#) via e-mail on a periodical basis.

Navigation

The screenshot shows the 'Mail' tab in the 'SMTP Server Configuration' section. The interface includes a navigation bar at the top with tabs: General, Exceptions, Data feeds, Notifications, Source configurations, User provider, Group provider, Authentication, and Mail. Below the navigation bar, the title 'SMTP Server Configuration' is followed by the instruction 'Here you can specify a mail server for distributing stories.' The form contains six fields, each with a numbered orange circle annotation on the left: 1. Authentication (dropdown menu), 2. Host name (text field with 'sysadmin'), 3. Port (text field with '25'), 4. Default address used for sending out mail (text field with 'info@celetons.com'), 5. Username (text field), and 6. Password (password field with masked characters). At the bottom left is a red 'Remove' button, and at the bottom right is a blue 'Save' button.

Please fill out your Authentication (1), Host name (2), default sender address (4), username (5) and password (6).

If necessary, adjust the port (3).
