

# General Component Options

The Component Options open as a Sidebar, when you [create a new Analysis Component](#) or hit Settings within an [existing](#) one.

The screenshot shows a sidebar titled 'COMPONENT OPTIONS' with a close button (X). It contains several sections: 'General Options' with a dropdown menu; 'Chart Title' with an edit icon and a text field containing 'Applications per Region'; 'Component Type' with a dropdown menu set to 'Pie Chart'; 'DIMENSIONS' with an 'ADD' button and a list containing 'Activity' with edit, menu, and delete icons; 'KPIS' with an 'ADD' button and a list containing 'Case Count' with edit, menu, and delete icons; and 'SORTING' with an 'ADD' button. At the bottom is a blue 'DONE' button.

This is a Sample Configuration, of a simple Pie Chart. The offered settings depend from your component, you will see different settings for a table and for a chart for example.

In the following pages, all options are explained in detail for the available components.

However, the General Options (such as setting Dimension(s), KPI(s) and a Sorting rule) are pretty much the same through all Charts and Tables.

- **Chart Title/Table Title:** Set a Title for your Component. This title will appear as a headline in your component.
- **Component Type:** Select/Change the Component Type. See the list on top of this page for more information about the available components.
- **Dimensions, KPIs, Sorting:** See the section below for information on how to handle with these settings. However, if you never heard about Dimensions and KPIs, it is recommended to read [Charts and Tables](#).
- **Advanced Options:** Below Sorting, some options are available (such as Legend/Scrolling options). As these options depend on your Component Type, they will be explained on the following pages.
