

Attribute Selection

ATTRIBUTE SELECTION

Select cases based on specific attributes.

e.g. only cases where region is "china", or cases that started on 2nd of February 2015.

With the Attribute Selection, you can apply a filter that selects cases based on specific attributes.

cases

- To add an attribute, start with choosing a table from the left side.
- You will see all columns of this table. Choose a column to see its content in the center.
- Now select a specific value (attribute) from this column. This will be then moved to the top of the column - list.

Attribute selection

Select cases based on column values.

Cases selected

68%
11450 cases

In our example, we filter for cases that specific activities. As you can see, the right side of the filter has changed, too. Here, you can see the absolute and procentual proportion of the selected cases, compared with all available cases.

Please note, that this number is affected by all active filters, including the (new) filter selection on this page.

After you are done, don't forget to confirm your selection with

DONE

.

Now your filter is set active, and appears in the filter overview.

Tip

NEW SELECTION ▼

With

NEW SELECTION ▼

, a dropdown - menu is opened, which you can use to change your filter. This way you don't need to close the filter view. This button is available in all filters.
