

Process Flow Selection

[blocked URL](#)

With the Process Flow Selection, you can select cases that are followed by a certain activity (or not).

[blocked URL](#)

In the selection fields, choose two **activities**.

After that, you can select a connection operator:

Selects cases that run directly from the first activity to the second activity that you selected.

Selects cases that run from the first activity to the second activity. On their way, they might also pass other activities.

Selects cases that pass the first activity and are not directly followed by the second activity.

Select cases that run through the first activity and are not directly or indirectly followed by the second activity.
